PROFILE

Electronics Engineering graduate with hands-on experience in hardware integration, sensors, embedded systems, and production automation. Interested in failure analysis, debugging, and root cause investigation of electronic circuits.

EDUCATION

Bachelor of Engineering in Electronics Engineering

Graduated May 2026

Suranaree University of Technology | Nakhon Ratchasima, Thailand

- Senior Project: Machine Vision Development Using AI Edge Computing — vision-guided pick-and-place system on a Delta Arm robot.
- Coursework: Circuit Design / Electronics Lab — designed and simulated circuits using Multisim.

Advisor: Dr. Manote Mapatho

WORK EXPERIENCE

Production Engineer Assistant

Feb 2026 – May 2026

Assistant Engineer Intern | SEWT-E, Korat (4 months)

Tools: PLC Programming, C/C++, Python, Data Integration, Sensors, Troubleshooting

- Programmed and optimized PLC logic for the Airleak machine quality-improvement project, reducing inspection errors through code-driven automation.
- Developed and tested scripts to process sensor data, ensuring real-time hardware-to-software integration and reliable system communication.
- Assisted in maintaining, repairing, and building factory machinery as part of the production engineering team.

Machine Vision Development Using AI Edge Computing

Jul 2024 – Oct 2024

Hardware Designer & Programmer | Senior / Capstone Project

Tools: SolidWorks, Blender, Python, PLC, Sensors

- Developed a machine vision system using AI edge computing to control a Delta Arm robot for automated pick-and-place operations.

High and Low-Pass Filter PCB Design

Jul 2024 – Feb 2025

Mini Project

Tools: KiCad, CST Studio, LTspice

- Designed and calculated a 2-stage LC low-pass filter for 568 Hz, achieving input-to-output gain transformation (-5 dB to +5 dB) using an amplifier with 10 dB gain.
- Performed complete 2-layer PCB layout design using KiCad: schematic capture, component placement, trace routing, and Design Rule Check (DRC) verification.
- Fabricated the PCB by etching the layout onto a double-sided copper-clad board, then validated filter performance using oscilloscopes and measuring instruments.

Deep Learning-Based Safety Alert System

Developer | Project

Tools: Python, ESP32, Google Colab

- Built and trained a deep learning model in Google Colab, then deployed the inference pipeline to an ESP32 microcontroller for real-time safety alerts.

TECHNICAL SKILLS

Microcontrollers & Embedded

ESP32, PLC, C/C++, Python

PCB & Circuit Design

KiCad, CST Studio, LTspice, Multisim

Cadence Allegro — currently learning

Debug & Analysis

Schematic reading, Circuit troubleshooting, Oscilloscope & measuring instruments

Design Tools

SolidWorks, Blender

Languages

1. Thai: Native 2. English: CEFR A2

SOFT SKILLS

- Strong learning attitude — quick to pick up new tools and technical domains
- Problem-solving, teamwork, and cross-functional coordination (hardware + software)
